

Figure S2. Particle deposition patterns for spacer configurations D3 and D4 and the flipped analogues D7 and D8. For the pictures on the left side the focus of the microscope is on the membrane, while for the ones on the right side the focus is on the glass. Characteristic deposition patterns have been marked with yellow contours. Flow is from top to bottom, as indicated by the red arrow. The white arrows indicate the glass-membrane correspondence of the patterns when flipping the spacer.
